Create first line indent

Gunnar Giffey - 2015-12-14 - 0 Comments - in C#

The following code snippet creates a first line indent programmatically:

```
TXTextControl.ParagraphFormat myFormat = new  
TXTextControl.ParagraphFormat(TXTextControl.HorizontalAlignment.Left)  
;  
myFormat.LeftIndent = 200;  
myFormat.HangingIndent = -200;  
textControl1.Selection.ParagraphFormat = myFormat;
```
