Create first line indent

Gunnar Giffey - 2015-12-14 - 0 Comments - in C#

The following code snippet creates a first line indent programmatically:

```
TXTextControl.ParagraphFormat myFormat = new
TXTextControl.ParagraphFormat(TXTextControl.HorizontalAlignment.Left)
;
myFormat.LeftIndent = 200;
myFormat.HangingIndent = -200;
textControl1.Selection.ParagraphFormat = myFormat;
```
